

electronically comparing said video signal of said video camera with known characteristics of movements that are indicative of an individual[s] having [a] criminal intent; determining the level of criminal intent of said individual, said determining step being dependent on said electronically comparing step; and generating a signal indicating that a predetermined level of criminal intent is present as determined by said determining step. ~~✓~~

Remarks

Reconsideration of the above-identified patent application is respectfully requested.

Claim 1 has been amended and is the only claim in this patent application.

Amendments to the Claim

Applicant has amended the claim to improve its readability and to correct an error. Specifically, Applicant corrected an inadvertent omission, by adding the term "video camera" after the word "said" to clarify the origin of the "video signal".

"electronically comparing said video signal of said video camera with known characteristics..."

The remaining amendments to the claim are self-explanatory and were made to improve the readability of the claim.
